

Family Outcomes Surveys

The original Family Outcomes Survey (FOS) was developed and validated by the Early Childhood Outcomes (ECO) Center to assess five family outcomes and the helpfulness of early intervention. There were multiple versions of the original Family Outcomes Survey, some for parents of young children with special needs and some for parents of all young children.

In 2010, upon request from states, the ECO Center developed an updated version of the FOS for Part C programs. The Family Outcomes Survey-Revised (FOS-R): Part C was designed to better assist Part C programs in measuring family outcomes and determining the helpfulness of early intervention programs for federal reporting and program improvement purposes. The core concepts in the FOS-R remain the same as in the original FOS, with the addition of more detailed information to guide program improvement activities and a modified survey format. Both the original and revised versions have been translated into Spanish as well as additional languages. Special thanks to our colleagues in Texas, Minnesota, and Washington for assisting with these translations. The ECTA Center supports the use of both the FOS (2006) and FOS-R (2010). These tools have been tested to ensure sound psychometric integrity that can be used to document family outcomes and identify areas for program improvement. If a state would like to adapt these surveys, we encourage you to reach out to staff and the ECTA Center to discuss potential adaptations and implications for producing reliable and valid data.
